

AMENDMENT

IN THE CLAIMS

Kindly amend the claims, as follows:

1. (Once Amended) A patch bag comprising a heat-shrinkable patch adhered to a heat-shrinkable bag, the heat-shrinkable patch comprising a first heat-shrinkable film and the heat-shrinkable bag comprising a second heat-shrinkable film, the first heat-shrinkable film comprising:

- A) [a first component comprising an] ethylene/alpha-olefin copolymer having a density greater than about 0.915 g/cm^3 , present in an amount of at least about 5 percent [,] based on a total weight of the first film; and
- B) [a second component comprising] heterogeneous ethylene/alpha-olefin copolymer having a density of less than about 0.915 g/cm^3 , [wherein the second component is] present [in the first film] in an amount of at least about 5 percent, based on the total weight of the first film; and

wherein the [first and second components] ethylene/alpha-olefin copolymer having a density greater than about 0.915 g/cm^3 and heterogeneous ethylene/alpha-olefin copolymer having a density of less than about 0.915 g/cm^3 together make up at least 70 percent of the total weight of the first film.

2. (Once Amended) The patch bag according to Claim 1, wherein the [first component] ethylene/alpha-olefin copolymer having a density greater than about 0.915 g/cm^3 and the [second component] heterogeneous ethylene/alpha-olefin copolymer having a density of less than about 0.915 g/cm^3 are present in separate layers of the first heat-shrinkable film.

3. (Once Amended) The patch bag according to Claim 1, wherein the first heat shrinkable film has a layer containing a blend of the [first component] ethylene/alpha-olefin copolymer having a density greater than about 0.915 g/cm³ and the [second component] heterogeneous ethylene/alpha-olefin copolymer having a density of less than about 0.915 g/cm³, wherein the [first component] ethylene/alpha-olefin copolymer having a density greater than about 0.915 g/cm³ is present in the blend in an amount of from about 5 to 95 percent, based on the weight of the layer, and the [second component] heterogeneous ethylene/alpha-olefin copolymer having a density of less than about 0.915 g/cm³ is present in the blend in an amount of from about 5 to 95 percent, based on the weight of the layer, and wherein the [first component] ethylene/alpha-olefin copolymer having a density greater than about 0.915 g/cm³ and the [second component] heterogeneous ethylene/alpha-olefin copolymer having a density of less than about 0.915 g/cm³ together make up at least 70 percent of the total weight of the layer.

4. (Once Amended) The patch bag according to Claim 3, wherein both the first and second heat-shrinkable films each have a total free shrink, at 185°F, of at least 35 percent, and the [first component] ethylene/alpha-olefin copolymer having a density greater than about 0.915 g/cm³ comprises linear low density polyethylene in an amount of from about 10 to 50 percent, based on total blend weight, and the [second component] heterogeneous ethylene/alpha-olefin copolymer having a density of less than about 0.915 g/cm³ comprises very low density polyethylene in an amount of from about 50 to 90 weight percent, based on total blend weight, with the blend optionally comprising a homogeneous ethylene/alpha-olefin copolymer having a density of from
